

Lilly Offers Free Thyroid Testing Program

As part of a national initiative to improve access to newly approved treatments, Lilly Oncology is offering a free thyroid testing program to help determine if patients have a genetic alteration that may inform therapeutic decisions. Please review the [details](#) outlined below and save the [attached form](#) to request a test for your patient as the need arises.

The Thyroid Cancer Testing Program is designed to provide access to molecular testing for appropriate advanced or metastatic medullary thyroid cancer (“MTC”) patients 12 years of age and older who require systemic therapy and advanced or metastatic non-medullary thyroid cancer (“non-MTC”) patients 12 years of age and older who are radioactive iodine-refractory (if radioactive iodine is appropriate).

Appropriate patients are eligible for one molecular test at no cost for the purpose of determining whether the patient has any actionable genetic alterations that may inform therapeutic decisions, without regard to purchase of any prescribed drug or any other product.*

No patient, health care program, payer, or beneficiary shall be billed for any test ordered pursuant to the Thyroid Cancer Testing Program.

To request a test for your patient, you may download the [Thyroid Cancer Testing Program Test Request Form attached](#).

*Eligible patient may receive either one (1) NGS Thyroid Profile test (for MTC) or one (1) NGS Thyroid Profile plus RET FISH test (for non-MTC), regardless of test results or treatment decision. No patient, health care program, payer, or beneficiary shall be billed for these tests. The tests shall not be included in a bundled payment to any health care facility including, but not limited to, a hospital. The ordering physician shall not be compensated any fees in connection with this testing, such as for specimen collection, handling, or data reporting. Program is not valid where prohibited by law. Eli Lilly and Company reserves the right to rescind, revoke, or amend the program for any reason without notice.

The Thyroid Cancer Testing Program is NOT available to New York State patients and facilities as the aforementioned NGS tests have not been approved by the New York State Department of Health.
